

esterpeel™

heat sealable lidding films

Esterpeel WP

Esterpeel WP is designed to give a weld seal to polypropylene where complete seal integrity is paramount. Will work equally well with thermoformed base web or preformed containers, and is suitable for liquids packaging.

Properties

Seals to:	Polypropylene
Gauge:	63 micron, 16.3m ² /kg
Seal conditions:	Heat seal range is from 170°C - 200°C, 1 second dwell time

Feature points

- Especially designed for sealing to polypropylene
- Weld seal hot or cold
- Frozen, chilled or ambient pack
- Also available in barrier version (WP+)
- May be supplied clear, white or reverse printed in full colour by the half-tone flexographic process. Ink is sandwiched in the laminate structure to protect machinery and prevent food contamination

Notes

- While FFP takes every precaution to ensure that lidding films are suitable for the end use specified, the responsibility for the specific application lies with the packer
- Any contamination present may result in seal failure, therefore sealing flanges should be kept clean at all times
- Where a peel seal is required, Esterpeel PS2 would be suitable
- Esterpeel WP has been tested and complies with all current European Food Contact Regulations
